Summary

Data Scientist, currently interning at Wealthsimple, with a B.Sc. in Computer Science and an M.Sc. in Data Science. Experienced in building end-to-end ML systems, designing data infrastructure, and delivering analyses that drive operational decisions. Focused on bridging the gap between data science and engineering to ship production systems with measurable impact.

Skills

Technical

Python · SQL · dbt · Airflow · Redshift · BigQuery · scikit-learn · Pandas · NumPy · NLP · Foundation Model Embeddings
A/B Testing and Experimental Design (Statsig) · Dimensional Modeling · Claude Code Prompt Engineering and Skill Building

Professional

Technical Communication · Problem Solving · Stakeholder Alignment · Cross-functional Coordination · CX Analytics

Work Experience

Data Scientist Intern, Customer Experience Operations (CXO)

Toronto, Canada

WEALTHSIMPLE

Jan. 2026 – present

- Led the end-to-end development of a lookalike client segmentation system for CX routing using embeddings and cosine similarity; deployed the automated production pipeline and established a long-running A/B experiment currently showing positive directional trends in asset migration
- Established an expandable data delivery framework, providing treatment overrides for standard account-tier logic to grant preferential routing and faster escalation to high-value or high-potential cohorts (e.g., active traders and lookalikes)
- Built and maintain a self-healing, idempotent data sync pipeline against the engineering monolith, operationalizing data logic previously unavailable to production; enables live UI customization and feature flagging (e.g., active trader flags) used by multiple teams
- Designed and shipped escalation and demand models for the customer experience data mart, replacing inconsistent legacy metrics with a single source of truth integrated into primary operational dashboards to drive staffing, routing, and service-level decisions
- Drove cross-team dimensional modeling standards by delivering a reusable, documented dbt fallback macro, adopted across multiple domains to ensure fact completeness, improve join reliability, and eliminate inconsistent data handling
- Delivered analyses that directly informed operational policies, including a risk segmentation study that redirected escalation paths for ~650 tickets/month and multiple demand analyses that optimized client support routing
- Serve as sole DRI owning an LLM-based ticket classification system routing ~50k emails/month; built a subtopic classification layer that allows team leads to customize queue filters, accelerating triage and resolution times for critical customer issues

Data Scientist, Subscription and Tech

Hamburg, Germany

FUNKE PUBLISHING GMBH

Jul. 2024 – Dec. 2024

- Set up a hybrid dbt Cloud + dbt Core solution for the team, streamlining development workflows and production deployments
- Supported database migration from MySQL to Google Cloud by building dbt models to restructure data and improve downstream reporting
- Independently scoped, built, and delivered automated dashboards and reports end-to-end to enable data-driven decision making

Operations Lead (Project Manager → Team Lead)

Hamburg, Germany

FAST LANE GMBH

Apr. 2023 – Mar. 2024

- Implemented data-driven process improvements that increased team throughput and strengthened cross-team collaboration
- Improved CX by optimizing the public training schedule to increase efficiency and reducing manual planning effort by 70%

Software Developer (Intern/Dual/Co-Op Student)

Hamburg, Germany

FAST LANE GMBH

Jan. 2020 – Mar. 2023

- Implemented and executed automated QA processes for backend infrastructure managing on-premise virtual machines for student labs
- Engineered reusable React components using Storybook and developed enterprise access-control logic to restrict course visibility

Education

Master of Science: Data Science

Hamburg, Germany

INTERNATIONAL UNIVERSITY OF APPLIED SCIENCES

Jul. 2024 – Aug. 2025

- Specialization in Big Data and Software Engineering; Thesis Grade 97%, Overall Grade: 93%

Bachelor of Science: Computer Science

Hamburg, Germany

NORDAKADEMIE HOCHSCHULE DER WIRTSCHAFT

Jan. 2020 – Mar. 2023

- Focused on algorithms, data structures, and software engineering fundamentals

Projects

Bias Mitigation in Machine Learning Using AIF360 - Pre-, In-, Post-Processing Methods

Master's Thesis

PYTHON · AIF360 · SCIKIT-LEARN · PANDAS · MATPLOTLIB

Apr. 2025 - Aug. 2025

- Built a reproducible and extendable pipeline to assess fairness methods across the ML workflow using the Adult Income and COMPAS datasets
- Architected end-to-end ML workflows—from ingestion to statistical evaluation—to deliver automated performance and fairness reporting
