Summary

Data Scientist, currently interning at Wealthsimple, with a B.Sc. in Computer Science and an M.Sc. in Data Science from Germany. Experienced in building end-to-end ML systems, designing data infrastructure, and delivering analyses that drive operational decisions. Focused on bridging the gap between data science and engineering to ship production systems with measurable impact.

Skills

Technical

Python · SQL · dbt · Airflow · Redshift · BigQuery · scikit-learn · Pandas · NumPy · NLP · Foundation Model Embeddings
A/B Experimentation (Statsig) · Dimensional Modeling · Claude Code

Professional

Technical Communication · Problem Solving · Stakeholder Alignment · Cross-functional Coordination · CX Analytics

Education

Master of Science: Data Science

INTERNATIONAL UNIVERSITY OF APPLIED SCIENCES

- Specialization in Big Data and Software Engineering; Thesis Grade 97%, Overall Grade: 93%

Hamburg, Germany

Jul. 2024 – Aug. 2025

Bachelor of Science: Computer Science

NORDAKADEMIE HOCHSCHULE DER WIRTSCHAFT

- Focused on algorithms, data structures, and software engineering fundamentals

Hamburg, Germany

Jan. 2020 – Mar. 2023

Work Experience

Data Science Intern, Customer Experience Operations (CXO)

WEALTHSIMPLE

- Designed and productionized an ML-based client segmentation system for CX routing; led the lifecycle from exploratory analysis using foundation model embeddings to an automated production pipeline validated via an A/B experiment
- Built an extendable, self-healing end-to-end data pipeline to hand off ML segmentations to engineering, driving personalized product experiences and automated customer support routing for multiple use-cases
- Designed and shipped escalation and demand models for the customer experience data mart, actively integrated into the organization's primary operational dashboards driving staffing, routing, and service-level decisions
- Drove cross-team dimensional modeling standards by delivering a reusable, documented dbt fallback macro, adopted across multiple domains to ensure fact completeness, improve join reliability, and eliminate inconsistent data handling
- Delivered analyses that directly informed operational policies including a risk segmentation study leading to an escalation path redirect for ~650 tickets/month, multiple demand analysis shaping client support routing, and ad-hoc analyses enabling self-serve reporting across teams
- Serve as sole DRI owning an LLM-based ticket classification system routing ~50k emails/month; architected a new subtopic classification layer enabling support teams to dynamically filter queues and enforce custom SLAs without modifying the core model

Toronto, Canada

Jan. 2026 – present

Data Scientist, Subscription and Tech

FUNKE PUBLISHING GMBH

- Set up a hybrid dbt Cloud + dbt Core solution for the team, streamlining development workflows and production deployments
- Supported database migration from MySQL to Google Cloud by building dbt models to restructure data and improve downstream reporting
- Independently scoped, built, and delivered automated dashboards and reports end-to-end to enable data-driven decision making

Hamburg, Germany

Jul. 2024 – Dec. 2024

Operations Lead (Project Manager → Team Lead)

FAST LANE GMBH

- Implemented data-driven process improvements that increased team throughput and strengthened cross-team collaboration
- Improved CX by optimizing the public training schedule to increase efficiency and reducing manual planning effort by 70%

Hamburg, Germany

Apr. 2023 – Mar. 2024

Software Developer (Intern/Dual/Co-Op Student)

FAST LANE GMBH

- Implemented and executed automated QA processes for backend infrastructure managing on-premise virtual machines for student labs
- Engineered reusable React components using Storybook and developed enterprise-level access-control logic to restrict course visibility on the FastLaneLive platform

Hamburg, Germany

Jan. 2020 – Mar. 2023

Projects

Bias Mitigation in Machine Learning Using AIF360 - Pre-, In-, Post-Processing Methods

PYTHON · AIF360 · SCIKIT-LEARN · PANDAS · MATPLOTLIB

- Built a reproducible and extendable pipeline to assess fairness methods across the ML workflow using the Adult Income and COMPAS datasets
- Architected end-to-end ML workflows—from ingestion to statistical evaluation—to deliver automated performance and fairness reporting

Master's Thesis

Apr. 2025 - Aug. 2025
